# WPA PROJECTS PLACED IN OPERATION

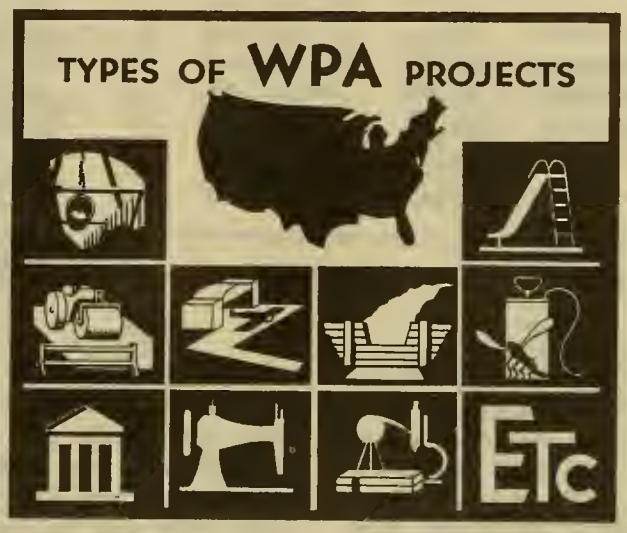
## THROUGH DECEMBER 31, 1936

Operations on over 120,000 Works Progress Administration projects, whose estimated completion costs total more than three and a half billion dollars, had been undertaken from the beginning of the Works Program in the summer of 1935 through December 31, 1936. The total estimated cost figures include not only Federal expenditures, but also those of the local communities which initiated and sponsored the projects and enjoy the benefits derived from them. The total estimated amount to be expended on projects of the Works Progress Administration in each of the various States and counties depends chiefly on the number of persons to be employed and on the wage schedules in effect.



An extensive road program, of which the development of farm to market roads and other rural roads, as well as the construction and repair of city streets, are outstanding features, accounted for nearly 40 percent of the planned expenditures. Roughly one-tenth of the total estimated costs of all projects was allocated to each of five other types of projects. These involve: (1) modernization and repair of many thousands of educational and other public buildings, and construction of new buildings and of additional units of existing ones; (2) development of various recreational facilities, especially parks, playgrounds, and athletic fields; (3) construction, extension, and improvement of public utilities, such as sewer systems and water works; (4) prosecution of white collar work, including not only statistical, research, educational and clerical projects, but also projects of an artistic and cultural nature, such as music, theater and recreation; and (5) preparation of various clothing and textile articles, of food and other products, for subsequent distribution to persons on relief rolls.

Other important operations of the Works Progress Administration were directed toward flood and erosion control, irrigation and other conservation work, the development of airport and other transportation facilities, and the improvement of sanitation and health conditions.

In general the emphasis of the program has been on construction activities - roads, buildings, utilities - with new construction not quite as extensive as repair and modernization work. Less than a fourth of all funds has been designated for non-construction work, largely composed of white collar and goods projects, but also including certain conservation and sanitation and health projects. The distribution of estimated expenditures between new construction, repairs and improvement, and non-construction has differed in the various States, determining factors being the available skills and abilities of the persons to be employed, and the conditions and needs of the communities sponsoring the projects.

Although most of the funds necessary for the operation of WPA projects were provided by the Federal Government under the 1935 and 1936 Emergency Relief Appropriation Acts, project sponsors agreed to supply about 13 percent of the estimated cost of completing the projects. Sponsors' funds tended to com-

NUMBER AND ESTIMATED COST OF WPA PROJECTS PLACED IN OPERATION THROUGH DECEMBER 31, 1936 BY MAJOR TYPES AND BY SOURCES OF FUNDS

A/Includes all Highway, Road and Street projects not devoted exclusively to farm to market road work.

prise a larger proportion of total funds in the case of construction work, particularly for road, public building, and utility projects, than for most non-construction work. This reflects the fact that sponsors' funds for the most part are expended for materials, supplies, and other non-labor expenses, which form a larger part of the total costs of construction than of other projects.

By December 31, 1936, three-fifths of the number of all projects placed in operation since the beginning of the program were no longer actively operating. That the estimated cost of these projects was only one-third the cost of all projects placed in operation resulted from the fact that the smaller projects tended to be completed sooner. However, neither the extent of accomplishment on all WPA projects, nor the comparative accomplishment among various types of projects or States can be measured from the data on completed projects alone, since they take no account of the large proportion of funds which have already been expended in completing units of projects still in the active category.

In view of the necessity of employing the maximum number of persons, project expenditures for other than labor costs have been relatively small. Almost three-fourths of estimated expenditures, including those of sponsors, have been set aside for the direct employment of labor. For most white collar projects more than 90 percent of all funds were for use in payment of labor costs. The requirements, however, of certain classes of construction projects, particularly road, buildings, and utility, necessitated expenditure of a larger proportion of the funds for materials and supplies. On these projects estimated labor costs were a little less than 70 percent of total costs. However, roughly half of the non-labor expenditures on such projects are to be met with sponsors' funds.

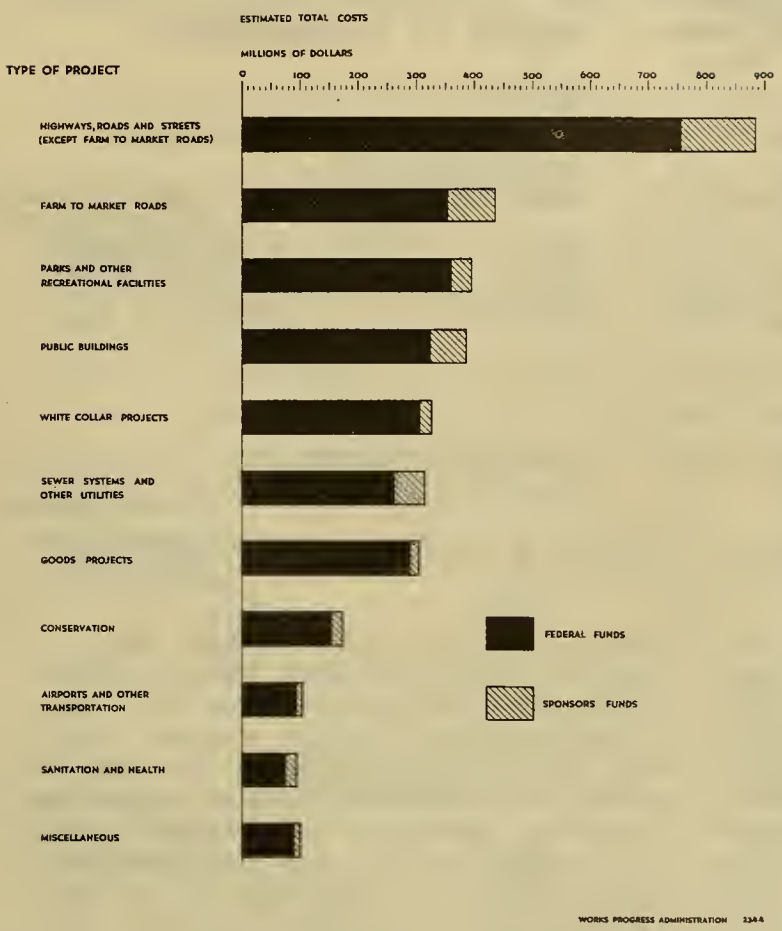
## Source of Data

The WPA projects which had been placed in operation were drawn from a larger group of projects which, submitted almost exclusively by local governmental bodies and approved by the President, were available for operation under both the 1935 and 1936 Emergency Relief Appropriation Acts. The only projects not locally sponsored were those located on Federal property and a limited number of nation-wide projects sponsored by the WPA. By December 31, 1936, WPA projects had been placed in operation in practically every county in the United States,

## WPA PROJECTS PLACED IN OPERATION

BY TYPES OF PROJECTS AND BY SOURCES OF FUNDS

Through December 31, 1936



their distribution being determined by local relief needs. Outside continental United States the WPA program was also operative in Hawaii.

Data for this report include all WPA projects on which operations (as evidenced by issuance of WPA pay checks) had begun prior to January 1, 1937. With the exception of certain completed projects, the tabulation was compiled from the Statement of Project Estimate Detail (WPA Form 701 Revised). For completed projects, the Report of Completed or Discontinued Projects (WPA Form 708), when available, was used.

Under current administrative requirements the estimates shown in the Statement of Project Estimate Detail represent the cost of completing the work unit or units which have been initiated. In instances where the work is of a type which may be carried on indefinitely or discontinued at any convenient time, the estimate includes the cost of future operations for a limited number of months.

### Data Presented in the Accompanying Tables

Data regarding projects placed in operation through December 31, 1936, which have been summarized briefly above, are presented in three groups of tabulations - national summaries, State tables, and summaries

NUMBER AND ESTIMATED COST OF WPA PROJECTS PLACED IN OPERATION THROUGH DECEMBER 31, 1936 BY TYPES OF WORK AND BY OPERATING STATUS

A/ Includes certain demolition projects not included under Public Buildings projects as shown in type of project tables.

for certain selected counties containing large cities.

The first three of the national summary tables show, by types of projects, the estimated project cost as divided between funds to be provided by the Federal Government and by project sponsors, between projects in active operation and those completed or otherwise inactive, and between funds to be used for the employment of labor and for other operating expenses. This information is presented separately for all projects, active projects, and completed projects in tables 4 to 6, inclusive. A similar set of tables present the data by States instead of by types of projects. The national summary tables are concluded by tables showing project cost by types of work (construction as compared to other types of work) for all, active, and completed projects, and by States.

The detailed State tables show for each State the estimated cost of all projects and of active and completed projects, by types. The same information is provided for each of the selected counties. These county tables are arranged alphabetically according to the name of the largest city in the county. It should be noted that the total estimated costs shown in these tabulations vary with and reflect not only the numbers of needy persons to be employed and the wage schedules in effect, but also the length of time the program has been in operation and the extent to which future costs are included in the estimates for projects already placed in operation.

Type of project detail as shown in this bulletin is based on a uniform coding system used throughout the country. Projects which can not be entered definitely under any specific type within a major group are shown as "other" under the major group; such projects often include more than one type of work. Those projects, only, which can not be classed under any major type, are included in the miscellaneous group.

Active projects, as presented in the accompanying tables, were limited to those which were in actual operation as of December 31, 1936. All other projects are shown as completed projects. Included in the latter category are projects for which all units of work, on the basis of which funds had been estimated, were physically completed as of that date. Also included are projects discontinued before the completion of all contemplated units of work. However, discontinuance was not permissible prior to a stage of accomplishment that involved completion of work units, so as to render the work of value and use to the community.

Because of the emphasis placed on the employment of labor, funds used directly for that purpose have been distinguished from those used for other purposes. Non-labor costs include purchases of materials, supplies, and equipment, rental of space and equipment, payment of transportation, service and utility charges.
